

LIFTING PLATE powerMOVE

for series smartFILL 4019/4519/4027/4527

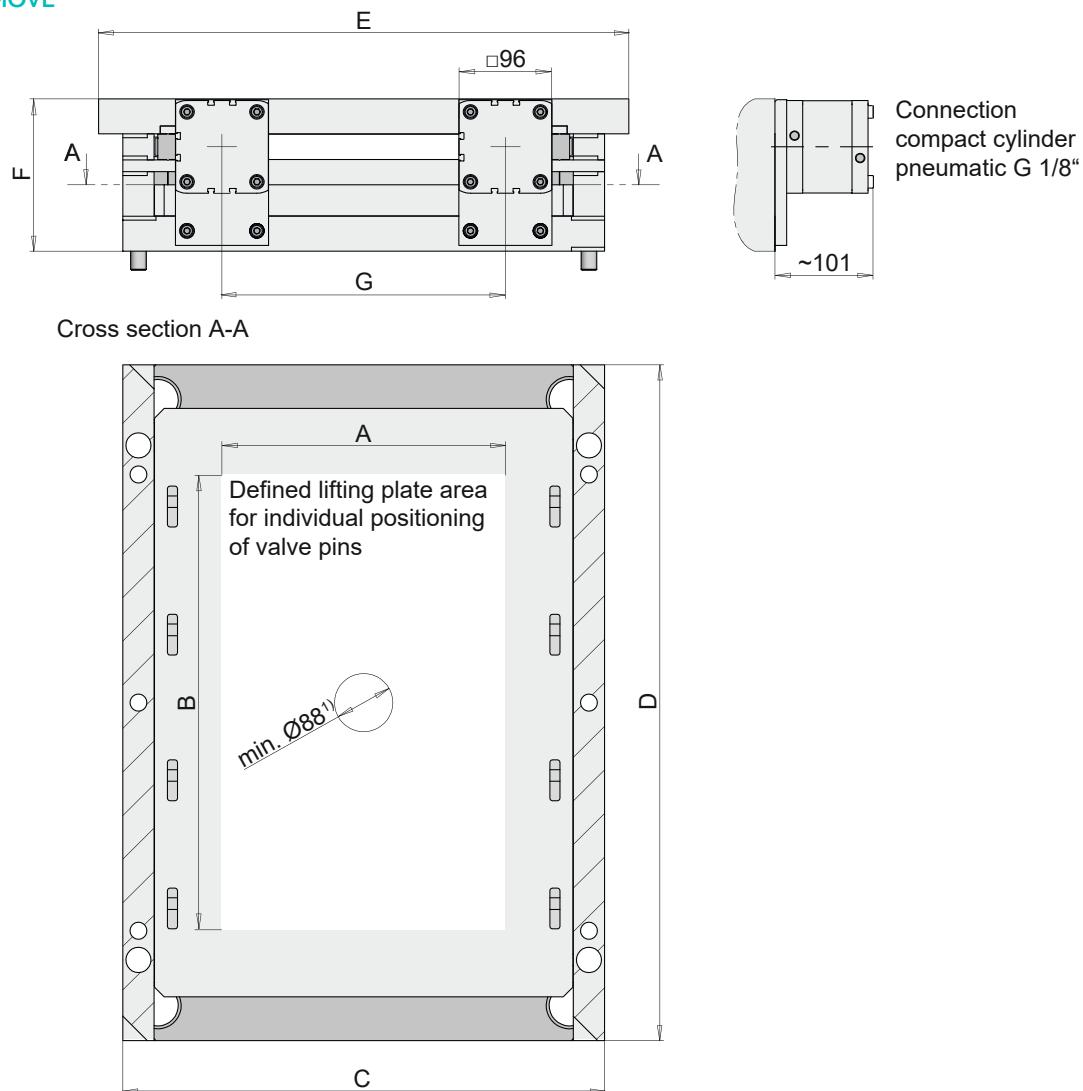

powerMOVE the lever operated lifting plate is part of the Meusburger hot half. It controls the synchronous OPENING and CLOSING of the valve pins of the hot runner manifold nozzles in the hot runner system.

OPTION

- » Shutdown of individual nozzle valve pins without opening the mould

DIMENSIONS powerMOVE

¹⁾ Required clearance for the sprue bush

NOZZLE POSITIONING/SPACING

Nozzle series	Min. nozzle spacing
4519	23
4019	28.5
4527	33
4027	40

powerMOVE FEATURES

- » Maximum closing force and low speed when plunging the nozzle valve pin into the gate
- » Increasing speed when opening the nozzle valve pin
- » Individual positioning of the valve pin within the defined lifting plate area
- » Configuration of the nozzle valve pins possible for very confined spaces
- » Smallest cavity distance and high number of cavities
- » Individual and stepless height adjustment of nozzle valve pins
- » Energy-saving and cost-effective operation
- » Lowest force losses compared to other actuation mechanisms (e.g. inclined plane)
- » Lifting frame is mounted on roller bearings
- » Self-lubricating and cleanroom compatible
- » No lubrication of the moving parts required
- » Actuation option: pneumatic
- » Standardised mould base suitable for Meusburger plate program
